

Veerender Nemali

Hyderabad(Telangana) | nemaliveerender73@gmail.com | +91 6305821755 | GitHub | LinkedIn

Skills

Languages: JavaScript, TypeScript, SQL

Frontend: React.js, Redux Toolkit, Zustand, Tailwind CSS, Material UI, Ant Design, TanStack Query, React Router

Backend: Node.js, Express.js, NestJS, REST APIs, JWT Authentication, API Development

Database: MongoDB, MySQL

CS Fundamentals: Data Structures and Algorithms, OOPs, DBMS, Operating Systems, Computer Networks

Tools: Postman, Vite, Parcel, Git, GitHub, AWS EC2

Work Experience

Patternlab.ai, Hyderabad

Nov 2025 - Mar 2026

Full Stack Developer Intern

- Contributed to a manufacturing analytics platform used for monitoring and visualizing machine production data
- Developed reusable dynamic filter component used across multiple tables and report interfaces to reduce repeated frontend logic
- Developed and maintained backend APIs using **NestJS** and **TypeScript**, including APIs built from scratch for a client analytics project, and worked with **MongoDB** for data storage and retrieval
- Integrated REST APIs in the frontend using **TanStack Query** and managed application state using **Zustand**
- Developed frontend dashboards and interfaces including tables, charts, and machine data visualizations using **Highcharts**
- Built reusable UI components using **Ant Design** and **Material UI** to improve consistency across interfaces

Education

St. Peter's Engineering College

Aug 2019 - Jul 2023

BTech in Computer Science and Engineering

Hyderabad

Projects

LedgerFlow - Backend

GitHub

- Built a **ledger based transaction processing backend** using Node.js, Express.js, and MongoDB to simulate money transfers
- Implemented secure **JWT authentication**, protected routes, and cookie based session handling for user login and registration
- Designed **ledger based accounting** with debit credit entries and dynamic balance calculation using **MongoDB aggregation pipelines**
- Applied **MongoDB transaction sessions** to ensure atomic debit credit operations with immutable ledger entries for audit integrity
- Implemented **idempotent transaction processing** using idempotency keys to prevent duplicate payments and inconsistent transactions
- Developed account management APIs and integrated **Nodemailer** with Gmail OAuth2 for registration and transaction email notifications

DevTinder - Full Stack

GitHub | Live

- Built full stack DevTinder using **React.js**, **Node.js**, **Express.js**, and **MongoDB** enabling users to connect and collaborate based on shared skills and interests
- Developed secure authentication and protected routes using **JWT**, HTTP only cookies, and **bcrypt** password hashing
- Managed frontend state using **Redux Toolkit** and implemented client side routing using **React Router**
- Built responsive and reusable UI components using **Tailwind CSS** and **DaisyUI**
- Implemented feed generation, pagination, and connection request workflows excluding users with existing connections or pending requests
- Developed REST APIs, validation middleware, and modular backend architecture, and deployed the application on **AWS EC2**

Streamify - Frontend UI

GitHub

- Developed a scalable single-page **video streaming application** using **React.js**, **Redux Toolkit**, and **Tailwind CSS**
- Integrated **YouTube Data API** to fetch videos, search results, and recommendation feeds dynamically
- Implemented **infinite scrolling** and optimized API usage for smoother content loading
- Built **search autocomplete with debouncing** to reduce unnecessary API calls and simulated **live chat functionality** for a real time interaction experience
- Improved performance using **shimmer loading UI** and optimized production builds with **Parcel**
